

PROJECT -1

COLLEGE NAME : GOVERNMENT DEGREE COLLEGE CHEEPURUPALLI

INSTITUTION NAME : SMARTBTIDGE

COURSE NAME: FULLSTACK DEVELOPMENT WITH MERN [JAVA]

OBJECTIVES:

Bulding an application that proactively used for WEATHER FORECASTING , A beautiful application designed for the have of weather updates sharing for the live wheather updates

Technologies used:

- HTML
- CSS
- Openwheather

HTML CODE:

HTML, CSS, JS

```

HTML CODE:

The screenshot shows a mobile application interface for editing code. At the top, the status bar displays the time as 11:10 AM, a data speed of 0.4KB/s, 5G+ connectivity, and a 27% battery level. Below the status bar is a navigation bar with a back arrow, the text "HTML, CSS, JS", and a menu icon. The main area is a code editor with a light gray background and a vertical scrollbar on the right. The code is as follows:

```
77     = "none";
78     }
79
80     function convertKelvinToCelsius(kelvin) {
81         return Math.round(kelvin - 273.15);
82     }
83
84     searchBtn.addEventListener("click", () => {
85         checkWeather(searchBox.value);
86     });
87
88     checkWeather();
89 </script>
90
91 </body>
92 </html>
```

At the bottom of the editor, a status bar shows "Ln 92, Col 8", "Spaces: 2", and a "History" link. Below this is a tab bar with a file icon, a refresh icon, a tab labeled "index.html" with a close button, a green "Run" button with a play icon, and a grid icon.

CSS CODE:

Final Look Of The App:

Final Look Of The App:

Link for the website:

<https://0d3a3935-070c-4885-aa26-279a59d4074e-00-19etaa0s2pae.pike.replit.dev/>

REPLICA FILE LINK:

<https://replit.com/@akhilstark2124/HTML-CSS-JS?s=app>

Conclusion :

I was created a website for the check the wheather for any city in the world it uses the api from openwheather app and it displays the exact current wheather of the city
